

Backing up Bookmarks from Safari

1. Open Safari and Export Bookmarks by navigating to **File/Export Bookmarks...**
(not necessary but a good idea to do from time to time)

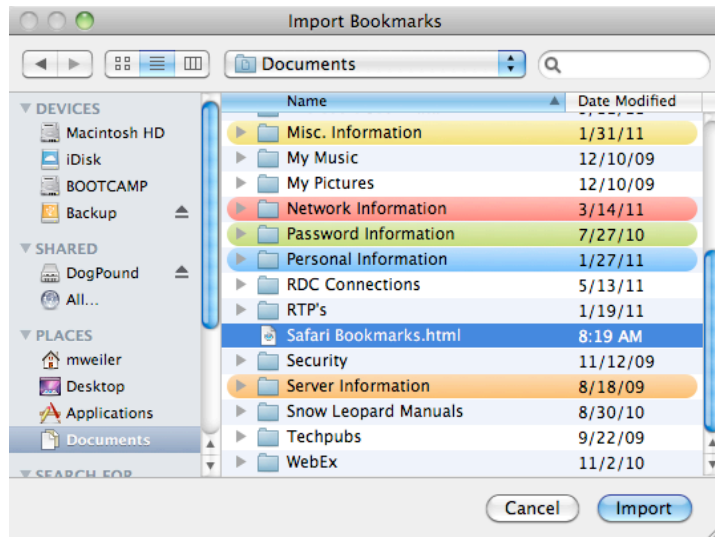

2. Name the file and save to a secure location.

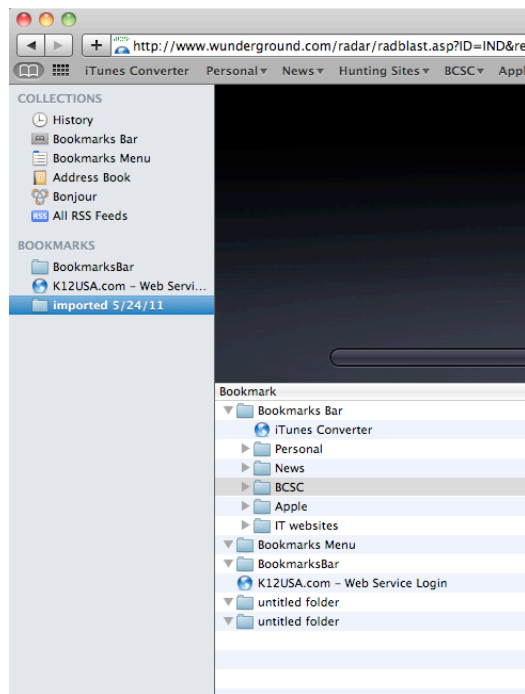

3. You have successfully backed up you Safari Bookmarks

4. To import your bookmarks is a rather simple process. Navigate to **File/Import Bookmarks**. Locate the exported bookmarks that you saved to a secure location and select. Now press the **Import** button.

5. The Show all Bookmarks window will automatically open and Safari will create an **“Imported with Date”** folder.

6. Select the **“Imported with Date Folder”**. The right side window will show all of the bookmarks that we backed up and the location where they were located. Simply click one of the bookmarks and drag it to the appropriate location under **Collections** in the left window.

That's it, you've successfully exported/imported bookmarks from Safari.
