

Connecting to a Wireless Network

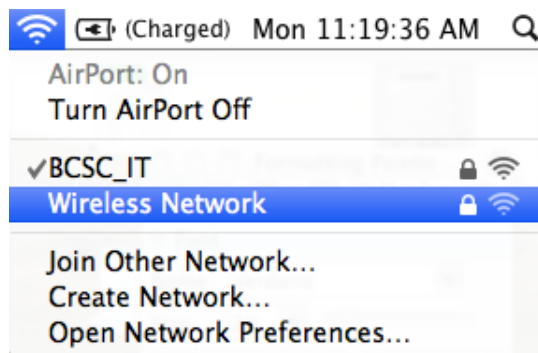

1. Navigate to the upper right portion of your desktop. You should notice several icons across the top Menu Bar.

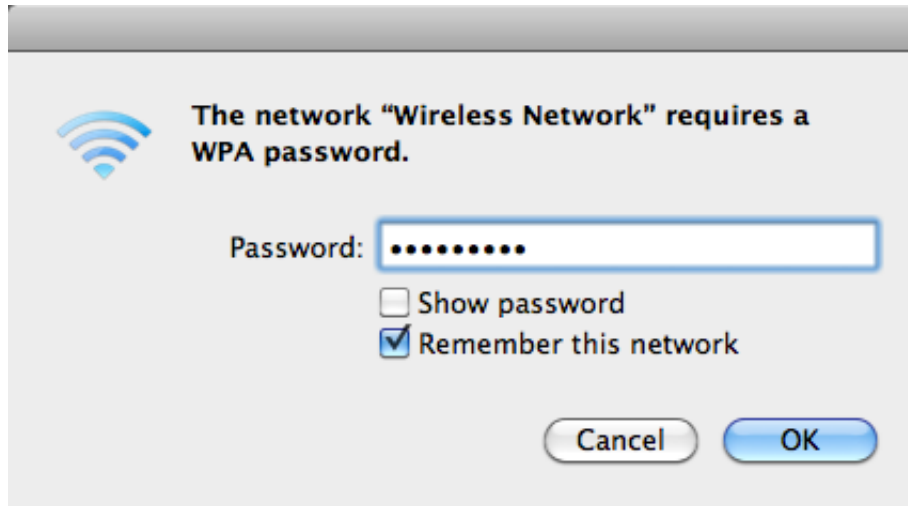

2. You are interested in the one that “looks” like a piece of pizza. Select it from the menu bar and verify that your Airport is turned on. If not select **Turn Airport On**.

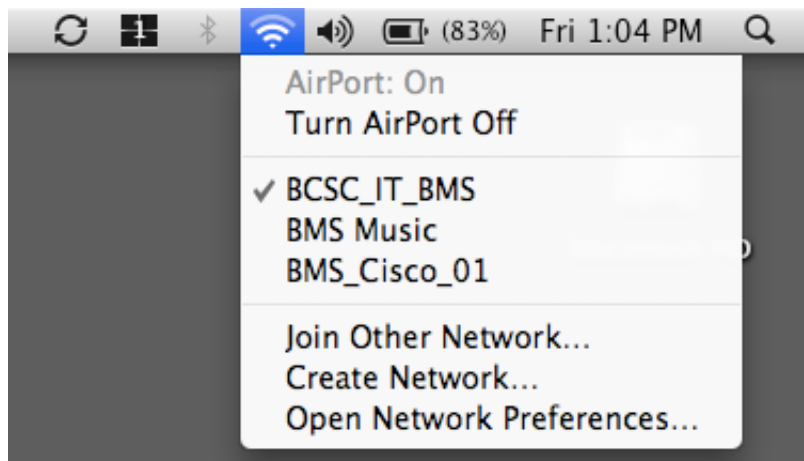

3. Select the wireless network that provides the best signal strength. To do so, go to the menu bar and pull down the airport icon and select a network.

4. You will be prompted for a password. Type in the appropriate password and select “OK”.

5. If you'd like to change to a different wireless network, navigate to the upper right portion of your desktop and pull down the Airport icon.

6. Select the network of choice. You will change to the appropriate network.
7. You may be required to enter a different password to join a different wireless network. If so repeat step 4.

You have successfully joined to a Wireless network.
